

HOLLIS SCHOOL DISTRICT WATER UPDATE

Month/Year	Typical Water Depth in Feet	Available Depth of Water (Ft.)
13-Oct-08	7	NA
Sep-10	7	3.1
May-11	7	6.2
Jun-11	7	6.4
Jul-11	7	5.5
Aug-11	7	4.6
15-Aug-11	7	4.6

The Hollis School District began to monitor the water depth in our well during the 2010-2011 school year, and does so more closely during any period where the water level drops significantly below the normal operating range.

Due to a significant drop in water level, requests have been mailed to all water system users and abutters of the well to voluntarily restrict their use of water from large uses such as irrigation and pool filling. They will be notified when the water level returns to the normal range.

Ongoing work is underway to identify a potential leak and to repair it as quickly as possible. This is being done using a free service of the federal government to walk the water line with sensitive listening equipment. It may also be necessary to install one or more valves to isolate a segment of water piping for replacement.

We are monitoring the well's water level and usage closely and appeal to abutters and community member who both use the same ground water source and/or are supplied directly by the system to assist us through the conservation of water and the restriction of its use until the well recovers.

If you have any questions, please contact the SAU at 465-7118.
